Hi,

I'm excited to apply for the Junior Data Scientist position at Pratham International because I'm passionate about using technology to improve education. With my background in machine learning, deep learning, and Natural Language Processing (NLP), I feel well-prepared to contribute to your impactful projects.

I've worked with tools like AWS and Google Vertex AI Studio to develop and deploy AI models, including chatbots and content generators. My skills in Python and SQL have helped me turn complex data into useful insights, and I'm eager to bring this experience to Pratham's projects like BaalSakhi and the Reading Assessment app.

What really draws me to Pratham International is your focus on creating technology that benefits children and youth in low-resource communities. I appreciate your commitment to ethical AI and designing solutions that make a real difference. I'm also excited about the chance to work with a talented team and to continue learning and growing in the field of AI and machine learning.

Joining Pratham International would be a great opportunity for me to apply my skills in a meaningful way and to help solve educational challenges on a global scale. Thank you for considering my application. I look forward to the possibility of contributing to your innovative work.

Best regards,
Gaurav Pawar
